DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-23, are drawn to a method of diagnosing a working condition of a catalyst, classified in class 60, subclass 277.
- II. Claims 24-28, 50, are drawn to a method of exhaust gas treatment having means (sensor) to analyze composition of exhaust gas, classified in class 60, subclass 276.
- III. Claims 29-49, 51, are drawn to a method for increasing heating rates of a catalytic converter at cold start condition of an engine, classified in class 60, subclass 284.

Inventions I, II, and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have different modes of operation. Specifically, claims 1-23 require a method of diagnosing a working condition of a catalyst and claims 29-49, 51 require a method for increasing the rate of catalyst heating at cold start of an engine. Because these inventions are distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the

Art Unit: 3748

inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
